DETAILED ACTION

Allowable Subject Matter

1. Claims 1-14, 16-21, 29-32 allowed respectively renumbered as 1-24.
2. The following is an examiner's statement of reasons for allowance:

Koto et al (US 6,671,376) discloses a discloses an apparatus for playing back data stored on an information recording medium (Column 6 Lines 45+ describes playing back the information from the recording medium), the data having audio information, visual information, or audio-visual information the data containing watermark, the apparatus comprising a playback circuitry comprising: Data store configured to receive at least some of the first data (Figure 7 shows RAM 38 used as a data store for the input of coded data from lines 46 and 47 as described in Column 13 Lines 58+); Detecting circuit coupled to the data store and configured to process data contained therein to produce a detection result, the detection result being based at least on the second data (Figure 7 address generator 36 generates the readout address thereby detecting the input and output of the memory as stated in Column 14 Lines 8-23). Furthermore it is taught by Copeland to store information onto the playback circuitry as recited in Column 5 Lines 34+. However, the prior art of record fails to disclose, suggest or teach the following limitations comprised in the playback circuitry:

"the data selection circuit and the detecting circuit operate in alternating fashion to alternate between storing a subset of the data to the data store and reading out the subset of the data for watermark detection."
